

Table S2. Speaker-Independent Dataset Split

Dataset partitioning used for model development and final evaluation.

Subset	Samples	Share (%)	Speakers	Protocol
Training	1610	70.0	18	No speaker overlap with validation/test
Validation	345	15.0	3	Held-out speakers
Test	345	15.0	4	Held-out speakers
Total	2300	100.0	25	Speaker-independent partition

Note: The split is 70/15/15 by sample count (1,610/345/345).

Note: No speaker appears in more than one partition.

Note: The four-speaker test set is an initial unseen-speaker evaluation and is not presented as a population-level generalization estimate.
