

Table S3. Source-Stratified Test-Set Analysis

Accuracy by recording-source group for the five non-Neutral emotion classes that occur in both source groups.

Model	Source group	N	Correct	Accuracy (%)
WavLM-FT	Scripted (A14)	250	200	80.00
WavLM-FT	Drama-derived (A04/A06/A03)	45	22	48.89
WavLM-FT	Difference (pp)	—	—	31.11
WavLM-FT+Aug	Scripted (A14)	250	230	92.00
WavLM-FT+Aug	Drama-derived (A04/A06/A03)	45	30	66.67
WavLM-FT+Aug	Difference (pp)	—	—	25.33
WavLM-PEFT	Scripted (A14)	250	232	92.80
WavLM-PEFT	Drama-derived (A04/A06/A03)	45	29	64.44
WavLM-PEFT	Difference (pp)	—	—	28.36

Note: Neutral is excluded from this comparison because all 50 Neutral test samples are from A14/scripted; there are no drama-derived Neutral test samples.

Note: The comparison describes a source-associated performance difference. It should not be interpreted as a causal estimate of recording style because source and recording characteristics are not experimentally isolated.

Note: The drama-derived group contains 45 non-Neutral test samples; the scripted group contains 250 non-Neutral test samples.
